

2024 ACCOMPLISHMENTS

HIDI

Better Data. Better Decisions.

Better Data. Better Decisions.

The Hospital Industry Data Institute's powerful analytics suite turns data into business intelligence — providing hospitals with insight into market share, risk management, quality improvement and more. Throughout the year, HIDI enhanced its platform by introducing new dashboards across three key channels: **Care**, **Risk** and **Fiscal Optics**. These dashboards offer valuable insights into rural community health, social determinants of health, perinatal quality, financial performance, and more, significantly broadening the platform's complexity, scope, and utility. This work builds upon and complements the flexibility and strategic value of the **Market Optics platform**.

PROGRESS

Better Data. Better Decisions.

HIDI's **Point of Care Solutions** combines the power of real-time data with unique analytic content to provide sophisticated, predictive analytics at the point of care. With 98 health care organizations now participating, providers and care managers have access to vital information that can enhance hospital workflows, improve patient care and support communication with all members of the care team across the continuum. Patient alerts provide immediate situational analysis and facilitate compliance with CMS Conditions of Participation for electronic patient event notifications.

BUSINESS

Better Data. Better Decisions.

At its core, **HIDI Advantage Fundamentals** includes secure and simple tools for accurate and reliable data collection and reporting, while **HIDI Advantage Optics** turns these data into business intelligence using dynamic state-of-the-art data visualization. **HIDI Advantage Analytics** includes the tools and expertise to forecast trends and seize opportunities. Ongoing investments in its platforms, technologies and staff demonstrate HIDI's steadfast commitment to helping hospitals make better decisions.

GROWTH

Better Data. Better Decisions.

In addition to serving Missouri and Illinois hospitals, HIDI continues to expand nationwide partnering with 15 states to collect and analyze data for 2,400 hospitals annually. Renewed interest in the **Multistate Data Exchange Program**, which provides participating states with the ability to scrutinize patient out-migration, has resulted in growing the program beyond just inpatient data to include the exchange of emergency department and ambulatory surgery data. There are 19 states currently participating in the inpatient exchange. HIDI's continued investment in **Advantage Optics** continues to generate increased subscription fees from other state hospital association partners. These collaborations and partnerships help support HIDI's investments in innovation and product development, while creating value for Missouri and Illinois hospitals.

A photograph of a male doctor with a beard and glasses, wearing a white lab coat over a dark blue shirt, holding a tablet. He is smiling and looking at an elderly woman with short grey hair, who is also smiling and looking at him. They are in a bright, modern hospital setting with large windows in the background. The word "INNOVATION" is overlaid in large, bold, blue capital letters across the middle of the image.

INNOVATION

Better Data. Better Decisions.

HIDI data has a long-standing legacy of helping to shape legislative and regulatory policy, and drive progress in health care quality and improvement. **HIDI's Determinants of Health Dashboard Program** — a flagship offering in the HIDI Advantage Care Optics platform — provides hospitals with unprecedented visibility into the potential drivers of health care disparities specific to their patient populations by stratifying hospital-specific administrative claims data into key sociodemographic groupings, such as race, ethnicity, age and gender. With 138 current active users from 73 participating Missouri and Illinois hospitals, plans are underway to scale the program nationwide in 2025.
